---

America is facing an energy-security paradox. Our domestic oil production is on the rise; the cars that roll onto our roads are more efficient than ever, and net oil imports are at their lowest level since the days when President George Herbert Walker Bush lived in the White House. Yet none of this has reined in the price of gasoline. This runs counter to U.S. conventional wisdom over the past forty years, touted by every president since Richard Nixon. Read more of [Gal Luft's article on the energy security paradox](#) .
